PROFILE

Third year computer engineering student with experience in Data Analytics, ML Research and Engineering and Full Stack Web Development. Worked on Transformer based Multi Organ Segmentation research focused on deep learning techniques, with research paper currently under review for an IEEE conference. Built responsive full stack applications and analytical dashboards by integrating frontend systems with backend APIs and databases while working on research and hackathon projects, including the NASA Space Apps Challenge. Skilled in data preprocessing, visualization, machine learning workflows, and Data driven application development using Python-based technologies. Contributed to an SSIP funded ML/DL, IoT and OpenCV based fraud detection solution for public transportation systems.

TECHNICAL SKILLS

DATA ANALYTICS & ML

- Python
- Pandas & NumPy
- Data Visualization (Seaborn, Power BI)
- ML Models
- Deep Learning
- Transformer Models

FULL STACK DEVELOPMENT

- ReactJS
- TypeScript
- Node.js
- HTML/CSS
- FastAPI
- REST APIs

TOOLS & PLATFORMS

- Git & GitHub
- Google Colab
- Jupyter Notebook
- Kaggle
- Google Scholar
- IoT & Automation

CORE COMPUTER SCIENCE

- C & Java
- Data Structures
- Algorithms
- DBMS
- Operating Systems
- Computer Networks

FEATURED PROJECTS & RESEARCH

SmartDoc AI – AI-Based Document Analyzer ([Demo](#)) : [ReactJS, FastAPI, MongoDB, Gemini API]

- Developed an AI-based system that supports document upload and Q&A based on the document content.
- Designed a responsive interface to support smooth document interaction and Q&A.

EV Trend Prediction & Analysis ([Github](#)) : [Python, Pandas, NumPy, Data Visualization]

- Performed data preprocessing, visualization & trend analysis on EV transportation dataset.
- Generated analytical insights on EV adoption, pricing trends, and environmental impact during IEEE Datathon.

Transformer based Multi-Organ Segmentation Research ([Github](#)) :

[Python, Tensorflow, PyTorch, Deep Learning, Transformer Models]

- Performed Data Generation & Data Preprocessing on multi organ Laparoscopic surgery based image dataset.
- Applied various deep learning architecture like Swin UNET, Swin UNETR to segment multiple anatomies

ACHIEVEMENTS & ACTIVITIES

Hackathons & Competitions

- [NASA Space Apps Challenges](#) - Developed AI-integrated and visualized dashboard for NASA research analysis.
- Dev Heat by IIIT Surat - Designed Digital Profile Analyzer
- IEEE Datathon - Built visualization of EV vehicle trends for future forecasting.
- SCET Tech Fest "Kshitij" - Active participant showcasing technical innovations

Cultural & Leadership

- Coordinated planning and execution of large-scale college events (Verve - 8000+ participants) and smaller events (SSIP event - 200+ attendees).
- Assisted in sponsor communication and partnership discussions.
- Collaborated in team-based hackathons and deep learning research projects.

EDUCATION

2023 - 2027

9.5+ CPI (Till SEM 6)

Bachelor of Technology in Computer Engineering

Sarvajanik College of Engineering & Technology (SCET), Surat
